

WEEK 1 DEADLINE DESCRIPTION: ME310 PROJECT 2

DR. C. ALEXANDER SIMPKINS

The idea here is to put as much effort as possible into development of your concept as early as possible. How are you going to solve this problem reliably? Be as specific and defined as possible.

- Please write down a description of your design process as you refined from initial concept to a narrower and more specific approach or possibly two concepts.
- Use the methods of concept generation to help guide you. Be as organized or use as much methodology as possible, and describe the methods you used.
- Describe your approach with any necessary means to get the idea across. You can link videos to dropbox or google drive, etc, include hand sketches, cad models, equations, code, pseudocode, etc. But you need to also provide a written description - it can't be all media, as the idea is to get you used to documenting your designs.
- There is no length limit or requirement, but it should be as specific and detailed as possible - effort now will save time later when writing the report
